

Built on our commitment to VMware, we deliver IT services exclusively to Channel Partners and Solution Providers to help clients leverage their investment in VMware technology. We have certified IT professionals to deliver the design, implementation, migration and management of services for both on-premise and cloud technologies.

LET COQUINA HELP YOU GROW YOUR VMWARE SERVICES BUSINESS

Application Modernization

Modern applications need to run on modernized infrastructure that provides the automation, security, and scalability to respond to external disruptions and the rapidly changing needs of your customers. This is where Coquina Systems and VMware Tanzu can help. Tanzu allows you to deliver better software to production, continuously. This results in less time to release code into production, increase developer productivity, reduce time to scale an application and less time spent in patch operations.

Disaster Recovery as a Service (DRaaS)

Protect your data, minimize downtime and reduce IT costs with Coquina Systems and VMware Cloud Disaster Recovery solutions. We can help your clients achieve access on-demand disaster recovery delivered as a SaaS solution, with cloud economics with a tiered approach to DR.

VMware Cloud Disaster Recovery can also bring a unique set of capabilities to address Ransomware attacks by allowing you to quickly restore critical applications, rehearse it, and choose a solution that supports your Service Response Plan.

VMware Cloud Services

With Coquina Systems and VMware Cloud Foundation (VCF) we can help your clients support both traditional enterprise and modern applications and provide a complete set of highly secure software-defined services for compute, storage, network, security, Kubernetes and cloud management. With the hybrid cloud architecture of VCF, we can help your clients prepare to:

- Deliver optimal performance for each application
- Access the broadest set of innovative hybrid cloud services
- Enable the greatest flexibility to build, run, and manage applications

As a VMware expert, we can help enable clients with a consistent, secure infrastructure and operations across private and public cloud.

Remote Workforce Solutions

Leveraging VMware's Digital Workspace technology such as Workspace ONE, Horizon and Horizon Cloud, Coquina can help you modernize your clients' employee experiences and collaboration, and facilitate better interactions between employees and customers. We'll help assess your clients' readiness and specific industry needs and support with device setup, endpoint security, staff and IT training including integration with Office365.
